SUMMARY

Product-focused Engineer who ships fast. I turn ideas into polished products and obsess over the details that make software feel right. I love building Clean Consumer facing Web and Mobile apps. I've worked on AI, inference, full-stack web and mobile apps at scale with TypeScript, Python, Go, Rust, C++, or whatever gets the job done.When I'm not shipping, I'm either exploring niche topics (that normies don't care about), running, sleeping, or eating.

WORK EXPERIENCE

Full stack product Engineer hibiscustech(psyplay.io) **June 2026 - Sept**

- Designed and integrated API contracts between Next.js frontend components and Go backend services, ensuring reliable data flow, type-safe communication, and responsive user experiences.
- Developed a game coin-based rewards system featuring daily reward claims and hourly Wheel Spin functionality to enhance player engagement and retention.
- Implemented client-side sound effects for key gameplay events, including winning, losing, capturing, and moving, improving feedback and the overall gaming experience.
- Built real-time chat and emoji reaction features from scratch, implementing WebSocket communication using the ws library in Node.js and Gorilla WebSocket in Go.
- Implemented chat filtering to detect abusive language and mask inappropriate words with asterisks, improving the safety of player interactions.
- Improved the tournament interface and user experience, enhancing UI usability and fixing bugs across tournament-related functionality.
- Investigated and resolved bugs in PsyPlay's bot mode, improving gameplay reliability and consistency.

PROJECTS

claude Github Typescript , NodeJs , LLMs
Terminal-based autonomous coding agent integrating Gemini and Groq models with filesystem and shell tools through a unified streaming interface. Features an autonomous read-act loop with context compaction, session persistence, and provider-agnostic tool execution for interactive and batch workflows.

MemeAi Github Python, OpenAI, PostgreSQL , Semantic Search, Vector Database RAG Graph DB PyPI
A memory system for AI apps that builds context graphs from interactions. Extracts facts as connected semantic and episodic memories, enables intelligent retrieval, and powers contextual responses across conversations .

flowforge Github Typescript, Trpc, Next.js, Shadcn, Inngest, AI models
Flowforge is a workflow automation platform where you build flows visually, connect integrations, and run AI + API automations from one place

Resumeai Link Typescript, Next.js, Shadcn, AI models, NeonDB, Razorpay ,Tailwind CSS
AI-powered resume builder creating ATS-optimized resumes with LLM enhancement and real-time preview

SKILLS

Languages: JavaScript, TypeScript, python, Golang
Frameworks/Lib: Fastapi, Django, Next.js, React.js, Node.js, bun.js, Express.js Tailwind CSS,
Databases/Services: PostgreSQL, Firebase, MongoDB, Redis, AWS
Tools: Git, GitHub, Docker, Cursor, Claude code, codex ,
Architecture: MVC & Microservices
